

# VIVID™

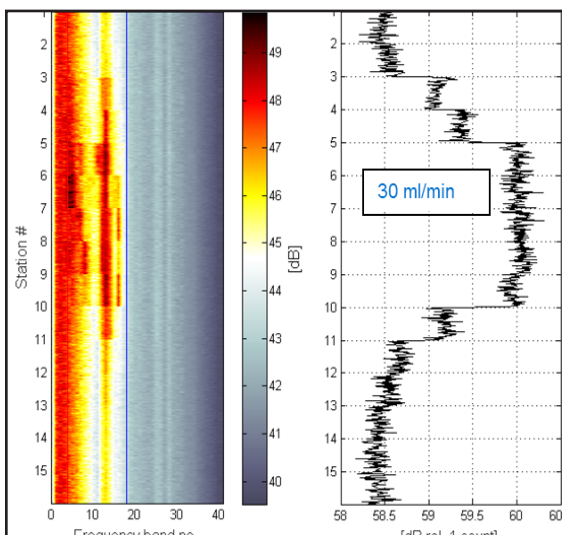

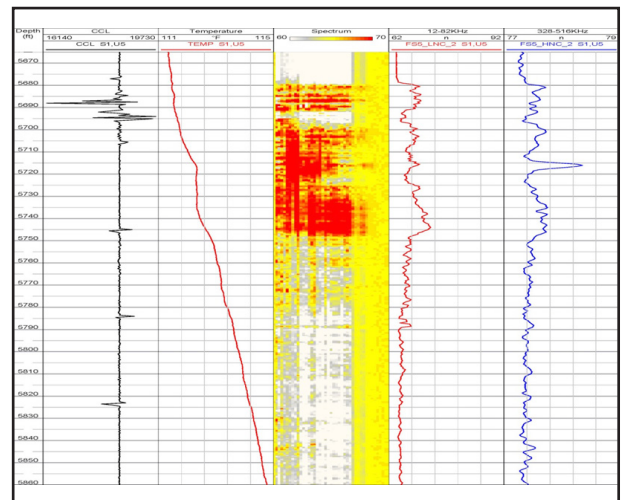

## Acoustic Listening Platform

### Full bandwidth - full information

Covering the broadest frequency bandwidth of any downhole acoustic service. **VIVID** reveals leaks, including those previously undetectable with conventional technologies, fully and rapidly.

### Casing and completion evaluation

Dynamic logging allows maximum sensitivity in minimum time with road-noise rejection, even in exterior casing strings. Elusive shallow leaks that may be masked by surface noise are easily found by **VIVID**.

### Cement performance evaluation

Even “good” cement may be leaking. Testing shows **VIVID** can detect flows as low as 0.03 litres per minute in a cemented annulus where bond logs showed good zonal isolation. Be assured.

## If it's there, we'll detect it
