

Archer Packer Milling Systems

Mill and retrieve packers and bridge plugs in a single run

The Archer range of Packer Milling & Retrieval systems provides a simple and effective method of retrieving drillable production packers and bridge plugs in a single trip.

The mill components of the system comes in two flavors; a solid mill to remove the complete section of a packer and a washover shoe to simply mill away the packer slips. Extensions subs are available to suit the various packer lengths.

Both options designed to recover the packers, with mill-out extension and with slick bore tailpipe assemblies, the packer retriever is configured so that the grapple can be positioned below the bottom of the packer before beginning milling the packer (using a solid mill -head) or packer slips (using a washover shoe). This position ensures that the grapple will catch the packer if it drops on completion of the milling operation.

Packer Mills are available in standard sizes or can be special ordered to any length and OD to meet the specific requirements of the job.

Features & Benefits

- Effective hole cleaning
- Adaptable to various packer IDs
- Ported mill body
- Spears that can be dressed for various packer IDs
- Blade-type tools
